The multi-purpose diagnostic instrument that allows you to hear the inaudible

USX-2 Superheterodyning technology

With a wide range of diagnostic uses it helps you to detect:

Mechanical Wear in:-
- Bearings, shafts, gears, cam and tappet assemblies
- Leaks in all pressurised systems, including:-
- Air conditioning & Refrigeration
- Compressed air
- Air Brakes & Tyres
- Vacuum leaks
- Electrical discharge due to insulation breakdown
- Cracks and leaks in containers, door seals, bodywork, etc.
- Ultrasonic parking sensors
- Fuel system flows
- High pressure steam leakage

...and much more

A necessity for preventative maintenance
Most mechanical faults and failures start out as very small defects or leaks. Such faults emit a high pitched noise as ultrasonic waves, which are beyond the range of the human ear. As the faults get more serious the noise gets more intense, the sound wavelength increases and enters the audible range. At that stage, the damage is already done. Instead, find the cause of the problem with the USX-2 before it’s too late.

Primalex’s USX-2 uses Superheterodyning technology to convert ultrasonic noises into audible range which mimic the natural sounds made by the defect.

Since USX2 is tuned to listen to the ultrasonic range, it is also unaffected by everyday sounds such as wind, voices, and traffic which can further hinder the technician’s ability to listen for a potential problem. This allows you to detect the faults and leaks in time for preventive maintenance by listening to the sound as well as using the LED display.

Also available from Primalec

- Glo-Leak UV
- NitroTrace & Leaktronic
- Refrigerant Analysis & ID
- Airco seal & Superseal
- Snow Leopard Lubricants
